Method

Required labour-hours = quantity x approved labour-hours per unit; crew-days = hours / (productive hours per worker x crew size); duration = ceil(crew-days / effective crews). Crew-output norms use units per crew-day and do not re-apply the labour-hours formula.

Assumptions, exclusions and limitations

- Quantities are human-measured BOQ quantities; the application does not measure drawings.
- Figures are taken from frozen estimate version v1 (fingerprint 400c9f6df7ae5579).
- SYNTHETIC / DEMONSTRATION data: rates, quotations, productivity norms, customer and responses are fictional test inputs, not market evidence.
- No norm is an industry benchmark; every value is a sourced company/project entry.
