note	No package scope entries recorded: the interface matrix is not in use, so no gap / double-count check was made.

Design interfaces

Key	interface	parties	responsibility	Status
fire-tie-in	Fire-water tie-in to existing ring main	Contractor / customer / existing-system owner	Customer provides tie-in flanges; contractor supplies and installs three tie-in assemblies (per synthetic response)	Draft
power	LV supply point for the new distribution boards	Contractor / customer	Customer provides the incomer; contractor terminates	Draft

Assumptions, exclusions and limitations

- Quantities are human-measured BOQ quantities; the application does not measure drawings.
- Figures are taken from frozen estimate version v2 (fingerprint 48d0f9242dc910b7).
- SYNTHETIC / DEMONSTRATION data: rates, quotations, productivity norms, customer and responses are fictional test inputs, not market evidence.
- Simulated handover: owners, dates and obligations shown are those recorded in the registers; none is invented.
