Quantified risk - summary

Field	Value
project_id	PRJ-9101
method	Independent risks: Bernoulli(p) x triangular(low, likely, high); range items: triangular deviation from the value in the estimate. No correlation; schedule impacts summed (no critical-path logic).

Assumptions, exclusions and limitations

- Quantities are human-measured BOQ quantities; the application does not measure drawings.
- Figures are taken from frozen estimate version v2 (fingerprint 48d0f9242dc910b7).
- SYNTHETIC / DEMONSTRATION data: rates, quotations, productivity norms, customer and responses are fictional test inputs, not market evidence.
- Sensitivity uses only quantified ranges that a person entered and approved.
